LISTING OF THE CLAIMS

1. (original) A method for cationically polymerizing olefin monomer comprising the step of using a composition having the chemical structure:

as a coinitiator in an organic phase or a neat monomer reaction phase.

2. (original) The method of claim 1, wherein the chemical structure is:

Application Number:
Response Dated:
Office Action Dated

10/817,187
September 1, 2006
March 1, 2006

3. (original) The method of claim 1, wherein the olefin monomer is selected from the group consisting of:

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldecene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

4. (original) The method of claim 1, wherein the olefin monomer is a $C_2 - C_{30}$ olefin or a $C_2 - C_{30}$ diolefin.

5. (original) The method of claim 1, wherein the olefin monomer is isobutene.

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

6. (original) The method of claim 1, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

7. (original) The method of claim 1, wherein the neat-monomer reaction phase is a liquid monomer.

8. (original) A method for cationically polymerizing olefin monomer comprising the step of using a composition having the chemical structure:

as a coinitiator in an organic phase or a neat monomer reaction phase;

wherein each R is independently selected from the group consisting of a perfluorophenyl; 3,5-bis(trifluoromethyl)phenyl; 1-perfluoronaphthyl; 2-perfluoronaphthyl; 2-perfluorobiphenyl; 3-perfluorobiphenyl; 4-perfluorobiphenyl; and $\text{p-R}^{\text{Si}}\text{-2,3,5,6-tetrafluorophenyl}$;

wherein R' is 1,2-perfluorophenylene; 1,2-perfluoronaphthalene; 2,3-perfluoronaphthalene; 1,8-perfluoronaphthalene; 1,2-perfluoroanthracene; 2,3-perfluoroanthracene; 1,9-perfluoroanthracene; 1,2-perfluorophenanthrene; 2,3-perfluorophenanthrene; 1,10-perfluorophenanthrene; 9,10-perfluorophenanthrene; 2,2'-perfluorobiphenylene; 2,2'-perfluoro-1,1'-binaphthalene; 3,3'-perfluoro-2,2'-binaphthalene; or 1,1'-ferrocene; and

wherein R" is a C₁, C₂, C₃, C₄, C₅, C₆, C₇, C₈, C₉, or C₁₀ alkyl.

9. (original) The method of claim 8, wherein the olefin monomer is selected from the group consisting of:

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldocene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

10. (original) The method of claim 8, wherein the olefin monomer is a C₂ – C₃₀ olefin or a C₂ – C₃₀ diolefin.

11. (original) The method of claim 8, wherein the olefin monomer is isobutene.

12. (original) The method of claim 8, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

13. (original) The method of claim 8, wherein the neat monomer reaction phase is a liquid monomer.

14. (currently amended) A method for cationically polymerizing olefin monomer comprising the step of using a composition having the chemical structure:

as a coinitiator in an organic phase or neat monomer reaction phase

wherein Y is boron or aluminum;

wherein each R is independently selected from the group consisting of a perfluorophenyl; 3,5-bis(trifluoromethyl)phenyl; 1-perfluoronaphthyl; 2-perfluoronaphthyl; 2-perfluorobiphenyl; 3-perfluorobiphenyl; 4-perfluorobiphenyl; and p-R"₃Si-2,3,5,6-tetrafluorophenyl;

wherein R' is 1,2-perfluorophenylene; 1,2-perfluoronaphthalene; 2,3-perfluoronaphthalene; 1,8-perfluoronaphthalene; 1,2-perfluoroanthracene; 2,3-perfluoroanthracene; 1,9-perfluoroanthracene; 1,2-perfluorophenanthrene; 2,3-perfluorophenanthrene; 1,10-perfluorophenanthrene; 9,10-perfluorophenanthrene; 2,2'-perfluorobiphenylene; 2,2'-perfluoro-1,1'-binaphthalene; 3,3'-perfluoro-2,2'-binaphthalene; or 1,1'-ferrocene; and

wherein R" is a C₁, C₂, C₃, C₄, C₅, C₆, C₇, C₈, C₉, or C₁₀ alkyl.

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

15. (original) The method of claim 14, wherein the chemical structure is:

16. (original) The method of claim 14, wherein the olefin monomer is selected from the group consisting of:

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldocene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

17. (original) The method of claim 14, wherein the olefin monomer is a C₂ – C₃₀ olefin or a C₂ – C₃₀ diolefin.

18. (original) The method of claim 14, wherein the olefin monomer is isobutene.

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

19. (original) The method of claim 14, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

20. (original) The method of claim 14, wherein the neat-monomer reaction phase is a liquid monomer.

21. (original) A method for cationically polymerizing olefin monomers comprising the step of using a composition having the chemical structure:

wherein $\text{Ar}^{\text{F}} = \text{C}_6\text{F}_5$ or $\text{Ar}^{\text{F}}_2 = \text{C}_{12}\text{F}_8$ as a coinitiator in an organic phase or neat monomer reaction phase.

22. (original) The method of claim 21, wherein the olefin monomer is selected from the group consisting of:

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldocene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

23. (original) The method of claim 21, wherein the olefin monomer is a $\text{C}_2 - \text{C}_{30}$ olefin or a $\text{C}_2 - \text{C}_{30}$ diolefin.

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

24. (original) The method of claim 21, wherein the olefin monomer is isobutene.

25. (original) The method of claim 21, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

26. (original) The method of claim 21, wherein the neat-monomer reaction phase is a liquid monomer.

27. (currently amended) A method for cationically polymerizing olefin monomers comprising the step of using a composition having the chemical structure:

wherein Ar^F = C₆F₅ or Ar^F₂ = C₁₂F₈ as a coinitorator in an organic phase or neat monomer reaction phase.

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

28. (original) The method of claim 27, wherein the olefin monomer is selected from the group consisting of:

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldocene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

29. (original) The method of claim 27, wherein the olefin monomer is a $C_2 - C_{30}$ olefin or a $C_2 - C_{30}$ diolefin.

30. (original) The method of claim 27, wherein the olefin monomer is isobutene.

31. (original) The method of claim 27, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

32. (original) The method of claim 27, wherein the neat-monomer reaction phase is a liquid monomer.

33. (original) A method for cationically polymerizing olefin monomers comprising the step of using a composition having the chemical structure:

Application Number:
Response Dated:
Office Action Dated

10/817,187
September 1, 2006
March 1, 2006

wherein Ar^F = C₆F₅ or Ar^F₂ = C₁₂F₈ as a coinitiator in an organic phase or neat monomer reaction phase.

34. (original) The method of claim 33, wherein the olefin monomer is selected from the group consisting of:

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldocene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

35. (original) The method of claim 33, wherein the olefin monomer is a C₂ – C₃₀ olefin or a C₂ – C₃₀ diolefin.

36. (original) The method of claim 33, wherein the olefin monomer is isobutene.

37. (original) The method of claim 33, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

38. (original) The method of claim 33, wherein the neat-monomer reaction phase is a liquid monomer.

39. (original) A method for cationically polymerizing olefin monomers comprising the step of using a composition having the chemical structure:

wherein $\text{Ar}^{\text{F}} = \text{C}_6\text{F}_5$ or $\text{Ar}^{\text{F}_2} = \text{C}_{12}\text{F}_8$ as a coinitiator in an organic phase or neat monomer reaction phase.

40. (original) The method of claim 39, wherein the olefin monomer is selected from the group consisting of:

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldocene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

41. (original) The method of claim 39, wherein the olefin monomer is a $\text{C}_2 - \text{C}_{30}$ olefin or a $\text{C}_2 - \text{C}_{30}$ diolefin.

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

42. (original) The method of claim 39, wherein the olefin monomer is isobutene.

43. (original) The method of claim 39, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

44. (original) The method of claim 39, wherein the neat-monomer reaction phase is a liquid monomer.

45. (original) A method for cationically polymerizing olefin monomers comprising the step of using a composition having the chemical structure:

wherein Ar^F = C₆F₅ or Ar^F₂ = C₁₂F₈ as a coinitiator in an organic phase or neat monomer reaction phase.

46. (original) The method of claim 45, wherein the olefin monomer is selected from the group consisting of:

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldocene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

47. (original) The method of claim 45, wherein the olefin monomer is a $C_2 - C_{30}$ olefin or a $C_2 - C_{30}$ diolefin.

48. (original) The method of claim 45, wherein the olefin monomer is isobutene.

49. (original) The method of claim 45, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

50. (original) The method of claim 45, wherein the neat-monomer reaction phase is a liquid monomer.

51. (original) A method for cationically polymerizing olefin monomers comprising the step of using a composition having the chemical structure:

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated March 1, 2006

wherein $X=CH_2$, NR, or O and $Ar^F = C_6F_5$ or $Ar^F_2 = C_{12}F_8$ as a coinitiator in an organic phase or neat monomer reaction phase.

52. (original) The method of claim 51, wherein the olefin monomer is selected from the group consisting of:

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldocene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

53. (original) The method of claim 51, wherein the olefin monomer is a $C_2 - C_{30}$ olefin or a $C_2 - C_{30}$ diolefin.

54. (original) The method of claim 51, wherein the olefin monomer is isobutene.

55. (original) The method of claim 51, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

56. (original) The method of claim 51, wherein the neat-monomer reaction phase is a liquid monomer.

57. (currently amended) A method for cationically polymerizing olefin monomers comprising the step of using a composition having the chemical structure:

Application Number:
Response Dated:
Office Action Dated

10/817,187
September 1, 2006
March 1, 2006

wherein $X = \text{CH}_2$, NR , or O and $\text{Ar}^{\text{F}} = \text{C}_6\text{F}_5$ or $\text{Ar}_2^{\text{F}} = \text{C}_{12}\text{F}_8$ as a coinitiator in an organic phase or neat monomer reaction phase.

58. (original) The method of claim 57, wherein the olefin monomer is selected from the group consisting of:

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldecene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

59. (original) The method of claim 57, wherein the olefin monomer is a $\text{C}_2 - \text{C}_{30}$ olefin or a $\text{C}_2 - \text{C}_{30}$ diolefin.

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

60. (original) The method of claim 57, wherein the olefin monomer is isobutene.

61. (original) The method of claim 57, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

62. (original) The method of claim 57, wherein the neat-monomer reaction phase is a liquid monomer.

63. (original) A method for cationically polymerizing olefin monomers comprising the step of using a composition having the chemical structure:

wherein $\text{Ar}^{\text{F}} = \text{C}_6\text{F}_5$ or $\text{Ar}^{\text{F}}_2 = \text{C}_{12}\text{F}_8$ as a coinitiator in an organic phase or neat monomer reaction phase.

64. (original) The method of claim 63, wherein the olefin monomer is selected from the group consisting of:

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldocene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

65. (original) The method of claim 63, wherein the olefin monomer is a $C_2 - C_{30}$ olefin or a $C_2 - C_{30}$ diolefin.

66. (original) The method of claim 63, wherein the olefin monomer is isobutene.

67. (original) The method of claim 63, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

68. (original) The method of claim 63, wherein the neat-monomer reaction phase is a liquid monomer.

69. (original) A method for cationically polymerizing olefin monomers comprising the step of using a composition having the chemical structure:

wherein $Ar^F = C_6F_5$ or $Ar^F = C_{12}F_8$ wherein as a coinitiator in an organic phase or neat monomer reaction phase.

70. (original) The method of claim 69, wherein the olefin monomer is selected from the group consisting of:

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldocene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

71. (original) The method of claim 69, wherein the olefin monomer is a $C_2 - C_{30}$ olefin or a $C_2 - C_{30}$ diolefin.

72. (original) The method of claim 69, wherein the olefin monomer is isobutene.

73. (original) The method of claim 69, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

74. (original) The method of claim 69, wherein the neat-monomer reaction phase is a liquid monomer.

75. (original) A method for cationically polymerizing olefin monomers comprising the step of using a composition having the chemical structure:

wherein $Ar^F = C_6F_5$ or $Ar^F_2 = C_{12}F_8$ wherein as a coinitiator in an organic phase or neat monomer reaction phase.

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

76. (original) The method of claim 75, wherein the olefin monomer is selected from the group consisting of:

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldocene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

77. (original) The method of claim 75, wherein the olefin monomer is a $C_2 - C_{30}$ olefin or a $C_2 - C_{30}$ diolefin.

78. (original) The method of claim 75, wherein the olefin monomer is isobutene.

79. (original) The method of claim 75, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

80. (original) The method of claim 75, wherein the neat-monomer reaction phase is a liquid monomer.

81. (original) A method for cationically polymerizing olefin monomers comprising the step of using a composition having the chemical structure:

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated March 1, 2006

wherein $\text{Ar}^{\text{F}} = \text{C}_6\text{F}_5$ or $\text{Ar}^{\text{F}}_2 = \text{C}_{12}\text{F}_8$ as a coinitiator in an organic phase or neat monomer reaction phase.

82. (original) The method of claim 81, wherein the olefin monomer is selected from the group consisting of:

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldocene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

83. (original) The method of claim 81, wherein the olefin monomer is a $\text{C}_2 - \text{C}_{30}$ olefin or a $\text{C}_2 - \text{C}_{30}$ diolefin.

84. (original) The method of claim 81, wherein the olefin monomer is isobutene.

85. (original) The method of claim 81, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

86. (original) The method of claim 81, wherein the neat-monomer reaction phase is a liquid monomer.

87. (original) A method for cationically polymerizing olefin monomers comprising the step of using a composition having the chemical structure:

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

wherein $Ar^F = C_6F_5$ or $Ar^{F_2} = C_{12}F_8$ as a coinitiator in an organic phase or neat monomer reaction phase.

88. (original) The method of claim 87, wherein the olefin monomer is selected from the group consisting of:

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldecene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

89. (original) The method of claim 87, wherein the olefin monomer is a $C_2 - C_{30}$ olefin or a $C_2 - C_{30}$ diolefin.

90. (original) The method of claim 87, wherein the olefin monomer is isobutene.

91. (original) The method of claim 87, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

92. (original) The method of claim 87, wherein the neat-monomer reaction phase is a liquid monomer.

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

93. (original) A method for cationically polymerizing olefin monomers comprising the step of using a composition having the chemical structure:

wherein $Ar^F = C_6F_5$ or $Ar^{F_2} = C_{12}F_8$ as a coinitorator in an organic phase or neat monomer reaction phase.

94. (original) The method of claim 93, wherein the olefin monomer is selected from the group consisting of:

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldecene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

95. (original) The method of claim 93, wherein the olefin monomer is a C₂ – C₃₀ olefin or a C₂ – C₃₀ diolefin.

96. (original) The method of claim 93, wherein the olefin monomer is isobutene.

97. (original) The method of claim 93, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

98. (original) The method of claim 93, wherein the neat-monomer reaction phase is a liquid monomer.

99. (new) A method for cationically polymerizing olefin monomer comprising the step of using a composition having the chemical structure:

as a coinitiator in an organic phase or neat monomer reaction phase;

wherein Y is aluminum; wherein each R is independently selected from the group consisting of a perfluorophenyl; 3,5-bis(trifluoromethyl)phenyl; 1-perfluoronaphthyl; 2-perfluoronaphthyl; 2-perfluorobiphenyl; 3-perfluorobiphenyl; 4-perfluorobiphenyl; and p-R''₃Si-2,3,5,6-tetrafluorophenyl;

wherein R' is 1,2-perfluorophenylenyl; 1,2-perfluoronaphthalenyl; 2,3-perfluoronaphthalenyl; 1,8-perfluoronaphthalenyl; 1,2-perfluoroanthracenyl; 2,3-perfluoroanthracenyl; 1,9-perfluoroanthracenyl; 1,2-perfluorophenanthrenyl; 2,3-perfluorophenanthrenyl; 1,10-perfluorophenanthrenyl; 9,10-perfluorophenanthrenyl; 2,2'-perfluorobiphenylenyl; 2,2'-perfluoro-1,1'-binaphthalenyl; 3,3'-perfluoro-2,2'-binaphthalenyl; or 1,1'-ferrocenyl; and

wherein R'' is a C₁, C₂, C₃, C₄, C₅, C₆, C₇, C₈, C₉, or C₁₀ alkyl.

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

100. (new) The method of claim 99, wherein the chemical structure is:

101. (new) The method of claim 99, wherein the olefin monomer is selected from the group consisting of:

ethylene, propylene, butene, pentene, hexene, heptene, octene, nonene, decene, dodecene, dodecyldecene, 3-methyl pentene, 3,5,5-trimethylhexene, isobutene, 2-methyl-butene, 2-methyl-pentene, vinyl ether, vinyl carbazole, isoprene, and combinations thereof.

102. (new) The method of claim 99, wherein the olefin monomer is a C₂ – C₃₀ olefin or a C₂ – C₃₀ diolefin.

103. (new) The method of claim 99, wherein the olefin monomer is isobutene.

Application Number: 10/817,187
Response Dated: September 1, 2006
Office Action Dated: March 1, 2006

104. (new) The method of claim 99, wherein the organic phase is a hydrocarbon solution of the monomer or a halogenated-hydrocarbon solution of the monomer.

105. (new) The method of claim 99, wherein the neat-monomer reaction phase is a liquid monomer.
